Greater Minnesota Gas, Inc.
Customer Approval Sheet

I have requested Greater Minnesota Gas, Inc., to install a service line and place a meter on my premises.

I am responsible for paying the current \$75 Activation Fee and any additional service line fees.

There is a \$8.00 monthly Facility Fee that begins at the time the meter is set. This charge will appear monthly whether I use any gas during the month or not.

The wholesale cost of gas is passed on to me directly at GMG's cost with no markup.

I will pay for natural gas delivery in two ways. The first is a monthly Facility Fee, which does not change with the amount of natural gas used. The second way is the Distribution Charge, a per Ccf (per cubic hundred feet) charge which changes each month with the amount of natural gas used.

I have received all the information I believe I need to make the decision to select natural gas for my home or business.

I understand that I may cancel this agreement at any time, have the service line disconnected and the meter set removed. The reconnection at a later date will be subject to a future activation fee.

Damage to underground facilities, not identified on the construction map by the customer prior to construction, will be restored at my expense.

I understand that Greater Minnesota Gas, Inc., will maintain a normal delivery pressure for:

- Residential customers @ 2 psig
- Commercial customers @ _____ psig
- Agricultural customers @ _____ psig

I understand that I am responsible for any costs connected with the conversion of my equipment as well as final connection to the gas meter.

I understand that the installation of my service will be done in accordance with accepted construction practices and I agree, in order to help contain costs, that I will be responsible for all final restoration of my property.

I understand that for my convenience, I have selected the location of meter installation. If I wish to relocate the meter or service line in the future, it will be subject to relocation charges.

Greater Minnesota Gas, Inc., has explained the use and furnished me with a fact sheet pertaining to Excess Flow Valves (EFV).

I do _____ I do not _____ want an EFV installed on my service line.

Customer Notice
Excess Flow Valve

As required by Federal Department of Transportation, Office of Pipeline Safety, regulations, we must notify you that a device commonly called an Excess Flow Valve (EFV) can be installed on your service line, at YOUR expense. This EFV must meet minimum standards established under these same regulations.

An EFV is designed to restrict gas flow to a set minimum through a service line to a residential property when the flow rate reaches a set maximum, effectively shutting off gas flow through the service line. The benefit of the EFV is in restricting gas flow when a very large gas leak occurs somewhere on the service line.

This maximum flow rate may be reached in several instances but most common when there is:

1. a broken service line venting to atmosphere, or
2. abnormally high demand for gas from appliances within the home

The EFV will not stop small or nuisance leaks on piping within a home and should not be expected to do so.

The installation of an EFV on your service line, if requested, will be done at your expense.

The expense of installation includes:

1. the cost of a special connection to the gas main
2. the cost of a larger than normal diameter service line
3. the cost of the extra testing time required during EFV installation
4. the cost of setting the meter after testing procedure

Greater Minnesota Gas, Inc., estimates the EFV installation cost would be approximately \$250.00.

Once installed, your EFV may close at times when a leak is not present on your service line due to high demand by your appliances or other circumstances. Any cost necessary to reset your EFV and determine the cause of the failure under these circumstances will be at your expense. We estimate that resetting an EFV will cost at least \$150.00; plus frost charges should digging be required during winter months.

Should the EFV malfunction, it may need to be replaced. Replacement would be at your expense as well and would cost at least \$250.00; plus frost charges should digging be required during winter months.
